EXPERIENCE

Vail Resorts

November 2025 – Present

Financial Analytics Analyst | Remote

- Replaced manual Concur spend categorization by using AI to mine historical transactions for patterns, encoded in an Excel mapping file and Alteryx workflow that categorizes 95% of spend across 1,000+ transactions with 100% accuracy
- Rebuilt the accounts payable and procurement Power BI dashboards end to end, cutting data sources from 40 to 10 and refresh time from 15 minutes to 1 by simplifying queries and standardizing naming, using TMDL and query exports to make bulk changes with Microsoft Copilot
- Built an actionable-invoice report that flags invoices eligible for early-payment discounts, giving the AP team a direct path to discount capture
- Built Alteryx workflows, Python scripts, and SQL pipelines that automate recurring financial data processes for the F&B, Tax, Sourcing, AR, and AP teams across a \$3B+ enterprise with 40+ resorts
- Led food & beverage financial reporting across all resorts, tracking actual vs. theoretical cost variances to surface margin leakage

Breakaway Data

June 2024 – September 2024

Data Analyst Intern | El Segundo, CA

- Built and deployed an internal R Shiny app that let non-technical staff safely work with the company database, adopted by about half the office (mainly HR and sales); interviewed the whole office on friction points, ranked them by value vs. effort, and shipped fixes in that order, cutting a multi-day workflow to seconds
- Led a client project turning wearable GPS data from Premier League players into trainer-ready performance reports using R, SQL, and Google Sheets
- Wrote SQL to retrieve and reshape database records, speeding up ad hoc data requests

PROJECTS

- **Personal AI Assistant:** Built a "second brain" of scheduled Claude agents connected to Gmail, Calendar, and a local file system that handles personal admin and delivers one daily list of action items via a briefing email and a Claude artifact dashboard
- **Reinforcement Learning for Neural Architecture Search (UCLA capstone):** Deep Q-learning agent that automates MLP architecture design, outperforming baseline methods
- **Stock Forecasting with LSTMs and Transformers:** Compared LSTM and transformer models for weekly S&P 500 forecasting and fed forecasts into a Modern Portfolio Theory optimization

EDUCATION

Georgia Institute of Technology

Expected August 2027

M.S. Computer Science, Artificial Intelligence specialization (part-time, online)

University of California, Los Angeles

September 2021 – June 2025

B.S. Data Theory; Minor in Data Science Engineering | GPA 3.993, Summa Cum Laude

- Relevant coursework: Machine Learning, Neural Networks, Artificial Intelligence, Statistical Modeling, Algorithms, Optimization, Linear Algebra, Probability, Data Structures

LEADERSHIP

Data Science Union, UCLA — Client Project Team Member

September 2022 – June 2025

- Analyzed 5 years of financial data for nonprofit Food Finder; delivered 8 visualizations and presented 4 recommendations to the CEO
- Built an unsupervised-learning resume screener trained on 2,400+ resumes, covering BeautifulSoup scraping, feature extraction, and visualization

SKILLS & CERTIFICATIONS

Languages: Python (pandas, NumPy, scikit-learn, matplotlib, seaborn), SQL, R (Shiny), C++

Tools: Alteryx, Power BI, Excel, Google Sheets, SAP Concur, Git/GitHub

AI: Claude (agents, scheduled automations), Microsoft Copilot, ChatGPT

Certifications: Bloomberg Market Concepts, Bloomberg Finance Fundamentals, CodeSignal SQL Basic

Interests: Sports analytics, markets, triathlon, marathons, backpacking, bass guitar, skiing, golf, pool
