WORK EXPERIENCE

Vail Resorts

November 2025 - Current

Financial Analytics Analyst

- Automated Concur spend categorization using Alteryx, eliminating 4+ hours of manual work per processing cycle
- Built Power BI dashboards delivering real-time financial insights to C-suite and cross-functional teams across a \$3B+ enterprise with 40+ global resorts
- Led F&B financial reporting across all resorts, tracking actual vs. theoretical cost variances to surface margin inefficiencies and ensure audit compliance
- Developed Alteryx workflows, Python scripts, and SQL pipelines to automate recurring financial data processes across F&B, Tax, Sourcing, AR, and AP teams

Breakaway Data

June 2024 - September 2024

Data Analyst Intern

- Developed and deployed an internal support website using R's Shiny package which expedited workflows from several days to seconds.
- Led a client project processing wearable GPS data from Premier League players, transforming raw performance metrics into trainer-ready reports; utilized **R** scripts, **SQL** queries, and Google Sheets to aggregate, clean, analyze, and format the data, improving reporting speed and accuracy.
- Wrote **SQL** scripts to retrieve and manipulate database records, streamlining ad hoc data requests.
- Managed version control and collaboration on GitHub, ensuring seamless code integration.

EDUCATION

Georgia Tech

August 2026 Start

Part-time online; MS in Computer Science with Machine Learning and AI Focus

University of California, Los Angeles

September 2021 - June 2025

Data Theory Major; Data Science Engineering Minor

- GPA: **3.993; Summa Cum Laude**
- Relevant coursework: Machine Learning, Neural Networks, Data Science in R & Python, Statistical Modeling, Algorithms, Linear Algebra, Optimization, Artificial Intelligence, Data Structures, Object Oriented Programming in C++, Multivariate Calculus, Probability
- **High-Dimensional Tic-Tac-Toe Solver:** Implemented Minimax algorithm with alpha-beta pruning and Monte Carlo Tree Search to optimize gameplay strategy in expanded board settings
- **Food Patterns:** Passion project where I analyzed 124K+ recipes using network theory (IF-IRF weighting, centrality, similarity metrics) to identify optimal ingredient pairings and visualize cross-cuisine flavor patterns.

EXTRACURRICULARS

Data Science Union - UCLA

September 2022 - June 2025

Client Project Team Member

- **Client Project:** Examined 5 years of financial data provided by the nonprofit Food Finder. Delivered 8 data visualizations and presented 4 key insights/recommendations to the CEO.
- **Internal Project:** Created a model trained on 2400+ resumes to act as a resume screener. This included data processing, feature extraction, data visualization, and unsupervised ML to create a model that the best 15% of resumes using Python's beautiful soup package.
- Completed a rigorous 10-week **Python** for Data Science curriculum, mastering essential libraries such as pandas, NumPy, matplotlib, and seaborn.

CERTIFICATIONS/SKILLS

- *Certifications:* **Bloomberg Market Concepts** and **Bloomberg Finance Fundamentals**
- *Skills:* R, Python, c++, SQL, Microsoft Word & Excel, chatGPT, problem solving, teamwork
- *Interests:* Sports, marathons, backpacking, bass guitar, skiing, golf, pool
